Quiz #4: Kinematics in Two Dimensions and Force and Motion

Problem 1 (1.5 points)

A baseball is hit at an angle θ and travels along a parabolic arc before it strikes the ground. Which one of the following statements is true?

- E**
- a) The acceleration of the ball decreases as the ball moves upward.
 - b) The velocity of the ball is 0 when the ball is at the highest point in the arc.
 - c) The acceleration of the ball is 0 when the ball is at the highest point in the arc.
 - d) The velocity of the ball is a maximum when the ball is at the highest point in the arc.
 - e) None of the above.**

$$v_y = 0 \text{ m/s}$$

$$v_x = v_{0x}$$

Problem 3 (1.5 points)

A toy racing car moves with constant speed around the circle shown below. When it is at point B, its coordinates are $x = -2 \text{ m}$, $y = 0 \text{ m}$ and its velocity is $(-4 \text{ m/s})\mathbf{j}$. When it is at point A, its velocity and acceleration are:

$$r = 2.0 \text{ m}$$

$$v = 4 \text{ m/s}$$

$$a = \frac{v^2}{r} = \underline{\underline{8.0 \text{ m/s}^2}}$$

direction is towards center

- D**
- a) $(4 \text{ m/s})\mathbf{i}$ and $(8 \text{ m/s}^2)\mathbf{j}$, respectively
 - b) $(4 \text{ m/s})\mathbf{i}$ and $(-8 \text{ m/s}^2)\mathbf{j}$, respectively
 - c) $(-4 \text{ m/s})\mathbf{i}$ and $(8 \text{ m/s}^2)\mathbf{j}$, respectively
 - d) $(-4 \text{ m/s})\mathbf{i}$ and $(-8 \text{ m/s}^2)\mathbf{j}$, respectively**
 - e) $(-4 \text{ m/s})\mathbf{i}$ and 0, respectively

$$a = \frac{F}{m} = \underline{\underline{8.0 \text{ m/s}^2}}$$

Problem 3 (3 points)

An object experiencing a constant force accelerates at 8.0 m/s^2 . What will the acceleration of the object be (in m/s^2) if:

- a) The force is the same and the mass is cut in half?

$$a_{\text{new}} = \frac{F}{(m/2)} = 2 \left(\frac{F}{m} \right) = \underline{\underline{16 \text{ m/s}^2}}$$

- b) The force is quadrupled and the mass is doubled?

$$a_{\text{new}} = \frac{(4F)}{(2m)} = 2 \left(\frac{F}{m} \right) = \underline{\underline{16 \text{ m/s}^2}}$$

- c) The force is cut in half and the mass is tripled?

$$a_{\text{new}} = \frac{(F/2)}{(3m)} = \frac{1}{6} \left(\frac{F}{m} \right) = \underline{\underline{1.3 \text{ m/s}^2}}$$

Problem 4 (4 points)

A baseball is thrown with an initial speed of 23.5 m/s at a 42.0° angle in the absence of air resistance.

a) What is baseball's speed and direction of the travel at $t = 3.00$ s?

$$V_{ox} = (23.5 \text{ m/s}) \cos 42.0^\circ = \underline{17.5 \text{ m/s}}$$

$$V_{oy} = (23.5 \text{ m/s}) \sin 42.0^\circ = \underline{15.7 \text{ m/s}}$$

y_0	y	V_{oy}	V_y	a_y	t
		15.7 m/s	?	-9.80 m/s ²	3.00 s

$$V = \sqrt{V_x^2 + V_y^2}$$

$$V = \sqrt{(17.5 \text{ m/s})^2 + (-13.7 \text{ m/s})^2}$$

$$\boxed{V = 22.2 \text{ m/s}}$$

$$\Theta = \tan^{-1}\left(\frac{V_y}{V_x}\right) = \tan^{-1}\left(\frac{-13.7 \text{ m/s}}{17.5 \text{ m/s}}\right)$$

$$\boxed{\Theta = -38.1^\circ}$$

$$V_y = V_{oy} + a_y t$$

$$= 15.7 \text{ m/s} + (-9.80 \text{ m/s}^2)(3.00 \text{ s}) = \underline{-13.7 \text{ m/s}}$$

b) What is the ball's height when it has traveled a horizontal distance of 35.0 m?

x_0	x	V_{ox}	t	\rightarrow	$x = x_0 + V_{ox} t$	\rightarrow	$t = \frac{x}{V_{ox}}$
0	35.0 m	17.5 m/s	?				

$$0 \quad 35.0 \text{ m} \quad 17.5 \text{ m/s} \quad ?$$

$$t = \frac{35.0 \text{ m}}{17.5 \text{ m/s}} = \underline{2.00 \text{ s}}$$

y_0	y	V_{oy}	V_y	a_y	t
0 m	?	15.7 m/s		-9.80 m/s ²	2.00 s

$$0 \text{ m} \quad ? \quad 15.7 \text{ m/s} \quad -9.80 \text{ m/s}^2 \quad 2.00 \text{ s}$$

$$y = y_0 + V_{oy} t + \frac{1}{2} a_y t^2$$

$$y = (15.7 \text{ m/s})(2.00 \text{ s}) + \frac{1}{2}(-9.80 \text{ m/s}^2)(2.00 \text{ s})^2$$

$$\boxed{y = 11.8 \text{ m}}$$

c) What is the maximum height reached by the baseball?

y_0	y	V_{oy}	V_y	a_y	t
0 m	?	15.7 m/s	0 m/s	-9.80 m/s ²	?

$$0 \text{ m} \quad ? \quad 15.7 \text{ m/s} \quad 0 \text{ m/s} \quad -9.80 \text{ m/s}^2 \quad ?$$

$$V_y = V_{oy} + a_y t \rightarrow t = \frac{-V_{oy}}{a_y} = \frac{-15.7 \text{ m/s}}{-9.80 \text{ m/s}^2} \rightarrow \underline{t = 1.60 \text{ s}}$$

$$y - y_0 = \frac{1}{2}(V_{oy} + V_y)t$$

$$y = \frac{1}{2} V_{oy} t = \frac{1}{2}(15.7 \text{ m/s})(1.60 \text{ s}) \rightarrow \boxed{y = 12.6 \text{ m}}$$
